

Information Systems Calisma sorulari

Cikmis olan sinav;

1.The most important properties of the information include;
Accuracy (Correctness)

2.What is a category of AI that attempts to emulate the way the human brain works;
Neural network

3.Which of the answers best corresponds to the answer to the question''what does the philosophy seek?;
Philosophy seeks in the world around us general truths and principles, mostly with universal validity.

4.Data is;
the representation of facts as text, numbers, graphics, images, sound or video

5.The most important properties of infomation include;
Relevance (Importance)

6.Which of the ansers best corresponds to the answer ot the question''what does science seek''?
Science in the field seeks and creates models (theories) that describe the realities and principles of reality in order to bring practical benefits

7.What terms describe IS in the 70's;
batch processing, separate applications, effectiveness of routine activities

8.Which of the listed information system components would you consider to be oldest in the history?;
Transaction Processing System

9.Some of the keu functions of a DBMS include;
Independent database application development and sharing the data across multiple applications.

10.''What terms descrie Information Ssystems today?;
distributed processing, 24/7 connection, focus on strategic change and innovations

11.The use of computers in data processing has had severl impacts on business.Which of the following is not one of them?
increased data-processing costs

12.Data Warehouseis ;
subject-oriented, integrated, non-volatile, time-variant

13.Which of the listed information system components you would consider to be the newest tech?
Decision support system with AI elements

14. ICT applications in IS typically include which of the following software types?

Application software, development software, system software

15. Which of the following is an example of a legal way to conduct competitive intelligence?

Seeking fiscal records from government sources.

16. What would you classify as current trends effecting Information systems

personification and information mining

17. What would you classify as current trends of Information Systems touch, voice control

18. Which of the given areas would you classify under the term E-commerce

Mobile Commerce

19. Which statement is related to concept of IS strategy –the IS represents the implementation of the required functionality (the master plan of the IS function)?

IS strategy is developed to support business strategy. IS strategy is a strategy in itself

20. What would you classify as a conservative approach when creating an IS Strategy

the use of a top-down approach is positively associated with the success of IS strategic planning.

25 Practice Questions – Information Systems & AI

1.

Which AI area attempts to emulate the way the human brain works?

- A) Expert system
- B) Neural network
- C) Data warehouse
- D) ERP system

Answer: B

2.

AI in modern IS is mainly used to:

- A) remove all managers from companies
- B) support analysis, prediction and decision-making
- C) store only historical paper documents
- D) replace databases completely

Answer: B

3.

Which of the following is listed as an AI field in IT innovations?

- A) Natural Language Processing
- B) Manual filing
- C) Paper reporting

D) Batch payroll

Answer: A

4.

Computer Vision is mainly related to:

A) understanding images and visual data

B) storing data in magnetic tapes

C) calculating salaries manually

D) printing reports

Answer: A

5.

Machine Learning means that a system:

A) learns patterns from data

B) only stores data without analysis

C) works only with paper documents

D) deletes historical records

Answer: A

6.

Deep Learning is most closely related to:

A) neural networks with many layers

B) manual accounting

C) simple text printing

D) paper archives

Answer: A

7.

Natural Language Processing is used for:

A) understanding and processing human language

B) cooling computer hardware

C) creating warehouse shelves

D) counting physical stock manually

Answer: A

8.

The main goal of ERP/ERPS is:

A) support decision-making process

B) make companies smaller

C) remove all business processes

D) replace employees' knowledge fully

Answer: A

9.

ERP/ERPS is an example of:

A) Information System

B) Philosophy

C) Pure hardware only

D) Social media platform only

Answer: A

10.

Which is an advantage of ERP/ERPS?

A) Centralized data and visibility

B) More data silos

C) Less reporting accuracy

D) No need for training ever

Answer: A

11.

Which is a disadvantage of ERP/ERPS?

A) Vendor lock-in

- B) Better customer service
- C) Improved accuracy
- D) Centralized visibility

Answer: A

12.

SAP S/4 HANA is connected with:

- A) in-memory data processing
- B) only paper-based systems
- C) no database usage
- D) manual payroll only

Answer: A

13.

Information systems do which of the following?

- A) data collection, reporting, analysis and decision support
- B) only philosophy questions
- C) only physical production
- D) only human emotions

Answer: A

14.

A Decision Support System is mainly used to:

- A) support decision-making activities
- B) replace all human thinking
- C) remove data from the company
- D) stop managers from planning

Answer: A

15.

DSS is typically used for:

- A) strategic and tactical decisions
- B) only typing documents
- C) only cleaning databases
- D) only entertainment

Answer: A

16.

According to DSS logic, raw data should become:

- A) useful information for decision makers
- B) useless duplicated files
- C) only printed paper
- D) deleted records

Answer: A

17.

DSS should:

- A) support managers, not replace them
- B) always replace managers
- C) avoid all analysis
- D) only work without data

Answer: A

18.

Computers in decision-making are strong at:

- A) quickly sorting and processing large quantities of data
- B) feeling emotions
- C) using only intuition
- D) ignoring quantitative variables

Answer: A

19.

Humans in decision-making are usually:

- A) flexible and adaptable
- B) always purely logical
- C) unable to use qualitative information
- D) identical in interpreting data

Answer: A

20.

A structured decision means:

- A) procedures can be specified in advance
- B) no procedure is possible
- C) only top management can decide
- D) AI cannot support it

Answer: A

21.

An unstructured decision means:

- A) most procedures cannot be specified in advance
- B) it is always automatic
- C) it is only a payroll calculation
- D) it has no business impact

Answer: A

22.

BPM is used to:

- A) optimize business performance and achieve business goals
- B) remove business goals
- C) replace all IS systems
- D) avoid monitoring KPIs

Answer: A

23.

BPM can be described as:

- A) BI + Planning
- B) ERP – Data
- C) AI without data
- D) Hardware + Paper

Answer: A

24.

KPI means:

- A) Key Performance Indicator
- B) Knowledge Programming Interface
- C) Key Paper Information
- D) Kernel Process Input

Answer: A

25.

Modern IS technologies include:

- A) cloud, virtualization, big data, AI and security
- B) only paper and local screen
- C) only magnetic tape
- D) only manual reporting

Answer: A

data warehouses agirlikli ve AI

Data Warehouse is:

- A) atomic, consistent, isolated, durable
- B) subject-oriented, integrated, non-volatile, time-variant
- C) a small temporary database
- D) only a visualization tool

Answer: B

2

The main purpose of a Data Warehouse is to:

- A) support analysis and decision-making
- B) replace all employees
- C) store only current transactions
- D) delete historical data

Answer: A

3

"Non-volatile" in Data Warehouse means:

- A) data is frequently deleted
- B) data is stable and not changed like operational data
- C) data is only visual
- D) data has no structure

Answer: B

4

"Time-variant" in Data Warehouse means:

- A) data is connected with time/history
- B) data has no date
- C) data is always deleted daily
- D) data is only real-time chat

Answer: A

5

Which one is more suitable for daily transactions?

- A) Data Warehouse
- B) Transaction Processing System
- C) Balanced Scorecard
- D) Competitive Intelligence

Answer: B

6

Which one is more suitable for strategic analysis?

- A) Data Warehouse
- B) Keyboard
- C) Printer
- D) File cabinet

Answer: A

7

BI mainly helps companies to:

- A) analyze data and create business insight
- B) manufacture computer chips
- C) remove all databases
- D) avoid decision-making

Answer: A

8

BPM can be summarized as:

- A) BI + Planning
- B) ERP – Data
- C) Cloud + Paper
- D) AI – Analysis

Answer: A

9

KPI stands for:

- A) Key Performance Indicator
- B) Key Program Input
- C) Knowledge Process Internet
- D) Kernel Performance Index

Answer: A

10

A dashboard is mainly used to:

- A) visualize important business information
- B) store physical documents
- C) replace operating systems
- D) clean hardware

Answer: A

11

Which of the following is an AI area?

- A) Natural Language Processing
- B) Paper archiving
- C) Manual filing
- D) Keyboard typing

Answer: A

12

A neural network is inspired by:

- A) human brain structure
- B) accounting paper books
- C) old magnetic tapes
- D) company hierarchy only

Answer: A

13

Machine Learning means:

- A) learning patterns from data
- B) deleting all data
- C) only printing reports
- D) only using human intuition

Answer: A

14

Computer Vision is about:

- A) interpreting visual/image data
- B) creating invoices
- C) managing salaries
- D) buying hardware

Answer: A

15

NLP is about:

- A) human language processing
- B) network cable management
- C) stock ordering only
- D) financial consolidation

Answer: A

16

Deep Learning is closely connected to:

- A) multi-layer neural networks
- B) paper reports
- C) manual calculations

D) simple data entry

Answer: A

17

The goal of using IS in management is to:

A) support management

B) remove all decision makers

C) stop business planning

D) avoid data analysis

Answer: A

18

Information systems and management:

A) interact with each other

B) are totally unrelated

C) cannot share data

D) only work in small shops

Answer: A

19

Who sets the rules in IS?

A) humans/managers through parameters and settings

B) only printers

C) only customers

D) no one

Answer: A

20

An example of automatic tools in IS is:

A) automatic stock ordering

B) writing philosophy essays

C) painting walls

D) replacing the company owner

Answer: A

21

ERP stands for:

A) Enterprise Resource Planning

B) External Report Program

C) Electronic Research Platform

D) Enterprise Risk Printer

Answer: A

22

ERPS means:

A) Enterprise Resource Planning System

B) External Resource Paper System

C) Employee Report Processing Software

D) Enterprise Random Planning Strategy

Answer: A

23

IS is:

A) more general than ERP

B) only SAP

C) only accounting

D) only AI

Answer: A

24

ERP/ERPS main goal is:

A) support decision-making process

- B) remove business processes
- C) create only social media posts
- D) reduce all information

Answer: A

25

Which is an ERP advantage?

- A) centralized data and visibility
- B) data silos
- C) weaker reporting
- D) no integration

Answer: A

26

Which is an ERP disadvantage?

- A) high costs
- B) better reporting
- C) improved accuracy
- D) scalability

Answer: A

27

Vendor lock-in means:

- A) company becomes dependent on one vendor
- B) company has no software
- C) company deletes ERP
- D) company avoids support

Answer: A

28

SAP, Oracle and Microsoft are examples of:

- A) ERP/ERPS leaders
- B) philosophy schools
- C) only hardware producers
- D) manual archive systems

Answer: A

29

SAP HANA is connected with:

- A) high-performance analytic appliance
- B) manual bookkeeping
- C) paper storage
- D) traditional-only file processing

Answer: A

30

In-memory database means:

- A) data is processed in high-speed memory
- B) data is stored only on paper
- C) data cannot be analyzed
- D) data is deleted immediately

Answer: A

31

DSS stands for:

- A) Decision Support System
- B) Data Storage Server
- C) Digital Sales Strategy
- D) Direct Software System

Answer: A

32

DSS is mainly:

- A) interactive computer-based system supporting decisions
- B) only a printer
- C) only a payroll system
- D) only a game system

Answer: A

33

DSS transforms:

- A) raw data into useful information
- B) managers into databases
- C) paper into hardware
- D) decisions into random guesses

Answer: A

34

DSS typically supports:

- A) strategic and tactical decisions
- B) only entertainment decisions
- C) only keyboard input
- D) only deleting records

Answer: A

35

DSS should:

- A) support, not replace, managers
- B) replace all managers
- C) ignore data
- D) only store photos

Answer: A

36

Structured decision means:

- A) procedure can be specified in advance
- B) no procedure is possible
- C) it is always creative
- D) it needs no data

Answer: A

37

Unstructured decision means:

- A) procedure cannot mostly be specified in advance
- B) always payroll calculation
- C) always automatic
- D) always simple routine

Answer: A

38

Semi-structured decision means:

- A) some procedures can be specified, but not enough for definite decision
- B) no data is needed
- C) it is always fully automatic
- D) it is only paper-based

Answer: A

39

Computers in decision-making are good at:

- A) processing large amounts of data quickly
- B) feeling emotions
- C) using intuition

D) replacing all human judgment

Answer: A

40

Humans in decision-making are:

A) flexible and adaptable

B) always identical in interpretation

C) only quantitative

D) never emotional

Answer: A

41

Cloud computing is:

A) provision of IT services via the Internet

B) only local paper storage

C) only a physical warehouse

D) a type of philosophy

Answer: A

42

SaaS means:

A) application/software as a service

B) hardware only

C) operating system only

D) database theory only

Answer: A

43

IaaS mainly provides:

A) hardware/infrastructure

B) only final application

C) only business strategy

D) only data visualization

Answer: A

44

PaaS is roughly:

A) IaaS + OS + application platform

B) only finished software

C) only physical paper

D) only keyboard service

Answer: A

45

Cloud idea is mainly:

A) pay for what you use

B) buy everything forever

C) avoid internet

D) remove scalability

Answer: A

46

Current IS phenomena include:

A) cloud, virtualization, big data, AI, security

B) only paper and pencil

C) only local screen

D) only magnetic tape

Answer: A

47

Application architecture evolved toward:

A) service-oriented architecture/API

- B) only paper folders
- C) no communication
- D) no frontend/backend

Answer: A

48

Competitive Intelligence is:

- A) legal and ethical information gathering about competitors
- B) business espionage
- C) stealing confidential data
- D) hacking competitors

Answer: A

49

CI helps decision-makers by:

- A) improving understanding of competitive environment
- B) removing market analysis
- C) deleting competitor data
- D) avoiding planning

Answer: A

50

CI mainly uses:

- A) public sources
- B) illegal hacking
- C) private passwords
- D) stolen documents

Answer: A
